HEALTH CONDITIONS

Abnormal postural habits or distortions are the result of trauma or stress to the body that have misaligned the vertebrae in your spine. When these vertebrae are twisted from their normal position, they will cause stress to the spinal cord and the delicate nerves that pass between the vertebrae. These misalignments are called subluxations (sub-lux-a-shuns). It has been extensively documented that subluxations, causing stress to your nerves, will weaken and distort the overall structure of your spine. This results in a weakened and distorted POSTURE. Postural distortions have many serious and adverse affects on your overall health. The most common and detrimental postural distortion is called Forward Head Syndrome (a "hunched forward" posture starting in the neck and progressively moving down your spine weakening the entire body). Please check any health condition you may be experiencing, now or in the past.
